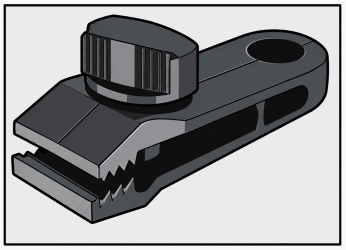
FASTENING CLIP

Black fastening clip with a turn knob and serrated clamping jaw for securing tarpaulins, covering material and film quickly and firmly; with an eye for elastic cord or rope.



This black fastening clip lets you secure tarpaulins, covering film and other covering material quickly and firmly. The serrated clamping jaw grips the material and holds it firmly in place, without the material having to be pierced. The turn knob lets you easily adjust the clamping force yourself. Elastic cord or rope can be attached through the eye in the clip, so the covering material stays taut, even in windy conditions. The clip is reusable and widely applicable in construction, scaffolding work, the transport sector and outdoor storage. Ideal in combination with our PIPE CLAMP and ELASTIC cord on reel.
