DPC 300mµ

DAMP PROOF COURSE

DPC (Damp-Proof Course) membrane is a waterproof barrier used in building construction to prevent moisture and water transfer. Typically made of polyethylene, it's installed between various layers of a structure such as walls and floors to prevent rising damp and maintain structural integrity. DPC membrane is essential for ensuring durability and reducing moisture damage to buildings.

Product information

- LDPE film, recycled
- 300mÂµ
- With both sides waffle structured surface
- Each DPC roll on hard paper core, inner Ø 48mm
- Each DPC roll wrapped in PE film, with neutral COVER label, 4 languages and EAN-code
- Transport packing in sturdy carton boxes
- Delivery on pallets (100×120cm)
- Pallet height approx. 150cm
